Exp 11: Exploring Network addresses Translation (NAT) using Cisco Packet Tracer.

AIM:

To Configure and explore Static NAT, Dynamic NAT, and PAT (Port addresses Translation) on a Cisco Routes using Packet Tracer.

Procedure:

1) Create topology: Internal PCs → Switch → Router → External server.

2) Assign public IP to router's outside interface: 203.0.113.1

3) Configure router inside/outside interfaces.

4) Dynamic NAT: ip nat inside source list 1 pool MY_POOL.

5) PAT: ip nat inside source list 1 interface Serial 0/0 overload

6) Verify with: show ip nat translations, show ip nat statistics

7) Test by pinging external server from internal pcs.

Result:

NAT was successfully configured on the router. Static NAT, Dynamic NAT & PAT and implemented and verified. Internal hosts were able to communicate with external networks using translated addresses.
