Exp 15: Analyze different types of servers using webalizer Tool.

Aim:

To analyze web server log files and generate detailed statistical reports about server usage the webalizer log analysis tool.

Procedure:

1) Install Apache2: sudo apt install apache2.

2) Install webalizer: sudo apt install webalizer

3) Run webalizer: sudo webalizer -c /etc/webalizer/webalizer.conf

4) Navigate output directory: cd /var/www/html/webalizer.

5) Open in desc. html in browser: http://localhost/webalizer/

6) View hourly/daily statistics charts.

7) Generate reports for multiple months and compare traffic trends.

```
# Install required pac
sudo apt-get install apache2 webalizer -y

# Generate sample traffic
for i in $(seq 1 50); do curl -s http://localhost > /dev/null; done

# View access log
cat /var/log/apache2/access.log | tail -20

# Run Webalizer on access log
sudo webalizer /var/log/apache2/access.log -o /var/www/html/webalizer/

# View output
ls /var/www/html/webalizer/
firefox http://localhost/webalizer/  # or xdg-open

# Manual webalizer config
sudo nano /etc/webalizer/webalizer.conf
# Key settings: LogFile, OutputDir, HostName, PageType, SearchEngine

# Parse and display log stats with awk (alternative)
awk '{print $1}' /var/log/apache2/access.log | sort | uniq -c | sort -rn | head -10
awk '{print $9}' /var/log/apache2/access.log | sort | uniq -c | sort -rn
```

Result:

Webalizer was successfully installed and configured, Web server.
